

**TECHNOLOGICAL OFFER**

- The Pilot Line can be used to:
- Develop smart composite parts.
  - Perform in-line control of the process parameters, including viscosity.
  - Perform in-mold control of the curing stage and pressure.

**COMPETITIVE PRODUCTS**

- Large smart composite parts.
- Functionalised materials.
- xxx.
- High production rate

**APPLICATIONS**

**UPGRADED TECHNOLOGY**

- Implementation of the monitoring at different stages of the process to guarantee homogeneity of nano-filled compositions including:
- In-line monitoring of the curing stage of the thermosetting resin.
  - In-mould pressure has been successfully monitored.
